

Introduction to Products

DuraDeck[™] & **DuraGrat**[™] Fibreglass grating is used extensively throughout industry as an alternative to traditional materials such as wood or steel. Fibreglass grating is a square mesh grating used for flooring on platforms, walkways, bridges etc. Its benefits are enormous. It is completely corrosion resistant, lightweight, easy to install and will give many years of maintenance free life. It can last 4 or 5 times longer than steel.

Our grating is available in 3 sheet sizes. 2m x 1m, 3m x 1m and 3.66 x 1.22. Green is our primary colour but Yellow and Grey are also stocked. Our grating can also be manufactured in any RAL colour. This is particularly useful if you have corporate colours and you would like a colour match.

DuraDeck[™] & **DuraGrat**[™] Fibreglass grating is manufactured in depths of 25mm, 30mm, 38mm, 50mm and 63mm. A hardwearing quartz grit can be added to the walking surface as an option to prolong the life of the grating and also to provide maximum anti-slip properties. Food grade grating without the grit surface is also a stock item. Yeungs Fibreglass Company keep a stock of at least 2000 square metres of grating at all times.

Our 25mm grating weighs just 11 kg per square metre and the 38mm grating weighs 18.3 kilos per square metre making it light enough for one person to install on his own without the need for forklifts or hoists etc.

We are able to supply GRP pultrusions called **DuraPro**[™]. These are GRP structural shapes, pultruded in long lengths for use in GRP constructions. Hundreds of shapes are available including box sections, tubes, solid bars, angles and H beams. Yeungs Fibreglass offers a complete service including free survey, free CAD drawings and free quotations. We can install your walkways or platforms for you on site or alternatively we can offer full instruction to your own maintenance teams.

Yeungs Fibreglass also manufacture ladders and stairways at our factory, called **DuraLad**[™]. Our ladders conform to British Standard and can be used in potable water. Ladders are built to customers' exact requirements. Furthermore, our grating is manufactured to strict ISO 9001 : 2000 standards so you can always be assured of the highest possible quality. This is something we take very seriously indeed.
